

ASSIGNMENT 2

1) Which field of the Customers table is the primary key?

CustomerID is the primary key — it uniquely identifies each customer in the table.

2) What is the 4th column of the Customers table?

The 4th column is Country, assuming the table follows the standard order:

CustomerID, CustomerName, ContactName, Country

3) What is another word for row? For column?

Another word for row: Record

Another word for Column: Field

4) Why isn't it possible to see the first five rows of a table?

It's not possible unless you explicitly request it using a SQL query.

Tables in relational databases do not have a guaranteed order by default, and simply opening a table doesn't automatically show only the first five rows. To see them, you would use a query like:

```
SELECT * FROM Customers LIMIT 5;
```

Or in SQL Server:

sql

Copy code

```
SELECT TOP 5 * FROM Customers;
```
